

Digital Printing

The technical solution for all cabin lining parts

DIEHL
Aerosystems

Characteristics

Digital printing is a technical solution for all cabin lining parts that allows individual cabin designs. Instead of pre-printed décor foils an individual print is applied directly to the interior part.

The first step is to paint the panel with a special base color. The second step is to apply the individual décor as a digital print. The décor can be either a geometrical pattern (known from the existing décor foils), or a full-color picture, a rendering or a vector graphic.

Benefits

- Less weight (in comparison to décor foil)
- Customizable design (also for each different panel)
- Possibility for overall pictures
- Reduced leadtime for new designs which are not out of catalog
