

## Front Row Monument

A fully tailor-made, high-quality product completing the environment of the first row business class seat. Easily adapted in color, shape, and material to all business class seats, aircraft platforms, and industrial design definitions.

## Characteristics

Front Row Monuments (FRM) create the environment in front of the business class seat. They include an integrated foot rest or ottoman, IFE screen, compartments for personal items, literature pockets, and other amenities, such as glass holders, coat hooks, holders for glasses etc. Each front row monument can be encased in the height of the seat, supplied as a full height monument, or in a space- and weight-saving combination with other cabin monuments, such as partitions, stowages, galleys, and lavatories. The modular concept allows easy adaptation of a basic structure developed for each aircraft platform to a fully customized FRM, which reduces lead time and costs.

## Benefits

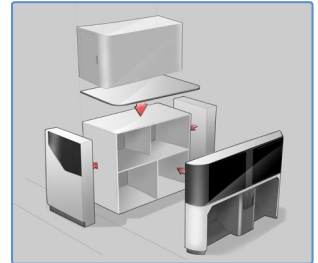

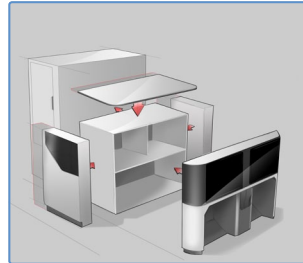

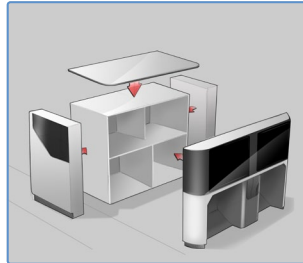

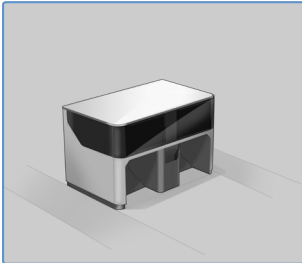

- Individual solutions
- Highly integrated units (functional variety)
- High quality workmanship and esthetics

## Features

- Robust lightweight design based on bonded sandwich panel structure
- Metal components are anodized and thus protected from corrosion
- Integration of customized compartments (convenience items)
- Electrical integration of IFE monitors

## Front Row Monument

A fully tailor-made, high-quality product completing the environment of the first row business class seat. Easily adapted in color, shape, and material to all business class seats, aircraft platforms, and industrial design definitions.

## Technical Data

Aircraft models	all passenger aircraft
Seat manufacturer	all seat manufacturers
Seat type	focus on business class seats
Seat layout	all seat layouts
IFE system	all certified IFE systems
Dimensions	adapted to customer requirements
Weight	optimized for specified size and functionality
