

Diehl Metal Applications at electronica 2018 in Munich

From November 13-16, 2018, Diehl Metal Applications (DMA) will showcase the latest developments in electronic and electrical applications at electronica – the leading international trade fair for electronic components, systems and applications.

Diehl Metal Applications works very closely with the development departments of its customers to produce application-specific, current-carrying solutions, above all for the automotive and electronics industry.

At electronica in Munich, DMA will present its fully-integrated value-adding chain for electronic and electrical parts and components – organized as a one-stop shop, directly from one source:

By means of alloy casting, copper alloys and semi-finished goods are generated. These are used to produce customer-specific metal-plastic compound systems using precision stamping and plating technologies.

Come and see our product and service portfolio for yourself: Order your free trade fair ticket www.diehl.com/electronica!

We are looking forward to welcoming you in Hall B2, booth 131.

About Diehl Metall:

Diehl Metall, is a Corporate Division of the Diehl Group founded in 1902 (sales: 3.8 bn. euros, number of employees: 17,173) and is headquartered in Röthenbach a.d. Pegnitz near Nuremberg, The company offers a broad spectrum of innovative products and technologies in the area of metal processing. In a global production network with locations in Europe, Asia, South America and the US, the technology driven company develops application-oriented solutions for international customers.

Diehl Metall also places great value on recyclable alloys and composite materials. To fulfil this responsibility, the company relies on technically optimized production processes and directs innovation activities toward future trends.
