

Our solutions for the production of connectors

Visit us at the User Connector Congress taking place in Würzburg from July 01-03, 2019.

Diehl Metal Applications (DMA) offers various key technologies for the production of connectors with its integrated value chain. We supply contact parts (e.g. press-fit zone contacts or SKEDD contacts), specific plating techniques (e.g. highly selective electroplating with S+D Advanced Indium or S+D Advanced SilverTin) and metal-plastic compound systems with overmolded contact parts.

Our competence center and our in-house laboratory are collaborating on the solderless press-fit connections of tomorrow (DIN EN 60352-5). The technical sales department clarifies and supports both, internally and externally and provides solutions for our customers. With the help of this knowledge, our system portfolio from a single source and our proximity to our customers, we are a strongly networked partner in the field of connectors for both, OEM's and Tier 1-3.

From July 01-03, we will be pleased to present our solutions to you at the User Connector Congress in Würzburg participating as an exhibitor. The conference is practice-oriented dealing with the technical aspects of design and application of modern connectors and offers an ideal platform to exchange ideas with experts from the industry.

This year's event will focus on current developments in the field of connectors, materials and surfaces as well as the interaction of connectors with cables and printed circuit boards.

For our customers we offer the opportunity to participate at a reduced price. You can simply register under the following [link](#) with the discount code >Stecker19-Diehl<. This will give you a discount of 50 Euro on your participation fee.

We are looking forward to your visit!

About Diehl Metall:

Diehl Metall, is a Corporate Division of the Diehl Group founded in 1902 (sales: 3.8 bn. euros, number of employees: 17,173) and is headquartered in Röthenbach a.d. Pegnitz near Nuremberg, The company offers a broad spectrum of innovative products and technologies in the area of metal processing. In a global production network with locations in Europe, Asia, South America and the US, the technology driven company develops application-oriented solutions for international customers.

Diehl Metall also places great value on recyclable alloys and composite materials. To fulfil this responsibility, the company relies on technically optimized production processes and directs innovation activities toward future trends.
