

Galley-Bar-Module

A new product innovation from Diehl Aviation in cooperation with Lufthansa Technik that provides operators with an additional versatile, flexible, passenger- and crew-friendly use of the galley area

Characteristics

The newly-developed Galley-Bar-Module is extractable and allows simple integration into a double trolley compartment within the existing galley space envelope. It offers a work top that can be used as a welcome desk, a bar counter, a self-service station, and/or a duty-free shop. Additionally, the module significantly increases the limited available working surfaces. The Galley-Bar-Module is equipped with internal foldable shelves, mainly used for standard units and shelves for self-service and/or duty-free articles from the outside. The module can easily be integrated into all existing galleys and across programs/fleets with the focus on twin aisle aircraft and entrance areas without loss of cabin revenue space. The social area it creates offers all passengers a zone for communication, relaxation, shopping and a bar, increasing passenger comfort and generating additional services. Whether as a duty-free shop or a bar with special drinks, this module generates additional revenue for the airline.

Benefits

- Reduces implementation costs for implementation
- Maintains cabin revenue space
- Creates possibilities for additional revenue
- Steady ticket prices at increased service level and comfort
- Reduces cabin customization efforts
- Maintains cabin installation time with increased cabin functionality

Galley-Bar-Module

A new product innovation from Diehl Aviation in cooperation with Lufthansa Technik that provides operators with an additional versatile, flexible, passenger- and crew-friendly use of the galley area

Features

- Multifunctional monument
- Easy plug & play solution
- Integrated solution
- Versatile utilization in different flight phases
- Compatible with existing galleys
- Alternative space utilization within the non-revenue cabin space

Technical Data

- Standard galley with extractable versatile module
- Integrated into a double trolley compartment
- Simple plug & play solution without system connection
- Passive cooling for ice cubes and beverages
- Light integration with fiber optics
- No loss of cabin revenue space with increased cabin functionality
- Retrofit-enabled solution
