

## **New UBA List Published – eZeebrass listed**

**Diehl Metall marks an important milestone with the inclusion of eZeebrass in the UBA positive list, further strengthening the future of lead-free brass alloys in drinking water applications.**

The material eZeebrass (CuZn41Mg, CW732R, C49400), developed by Diehl Metall, is now listed on the German Federal Environment Agency's (UBA) national positive list for metallic materials in contact with drinking water. With the publication of the sixth amendment of recasting as at August 21, 2025, eZeebrass has been formally recognized as a material suitable for drinking water hygiene.

### **Significance for practice**

Inclusion in the UBA positive list is a prerequisite for manufacturers and users to be able to use eZeebrass in drinking water installations. The successful listing underscores the high quality and safety of Diehl Metall's lead-free copper-zinc-magnesium alloy.

### **Next step: European recognition**

The procedure for including eZeebrass in the "4 Member States Initiative" (4MSI) has already been started. This will ensure that the material is also confirmed as suitable for drinking water hygiene at the European level. "With the official inclusion of eZeebrass in the UBA positive list, we have achieved another milestone for the future of lead-free brass alloys," says Dr. Volker Bräutigam, Head of Business Development at Diehl Brass Solutions. "This is an important step toward ensuring the highest quality and hygiene standards in drinking water installations."

### **About eZeebrass**

eZeebrass is an innovative lead-free copper alloy offering excellent machinability, outstanding hot forming properties, and high corrosion resistance. It provides a sustainable solution for modern drinking water installations as well as other applications.

**About Diehl Metall:**

About Diehl Metall: Diehl Metall is a Corporate Division of the Diehl Group founded in 1902 (sales: 3.8 billion euros, employees: 17,665) and has its headquarters in Röthenbach a.d. Pegnitz near Nuremberg. The company offers a broad spectrum of innovative products and technologies in the area of metal processing. In a global production network with locations in Europe, Asia, South America and the US, Diehl Metall develops application-oriented solutions for international customers.

The company assumes responsibility in the area of climate and resource protection, and places great value on recyclable alloys and composite materials. To fulfil this responsibility, Diehl Metall relies on technically optimized production processes and directs its innovation activities toward future trends.
