

ICAS PARTITION

CHARACTERISTICS

The new iCAS partition takes the ECO 16g partition even one step further: It blends two products into one solution. It is a partition with integrated single/double Cabin Attendant Seat (CAS). Through this innovative combination, we have reduced the number of parts and joints. The result is a weight saving of more than 10 kg per partition, which corresponds to a reduction of 15 to 20% depending on the configuration.

In addition to weight savings, the integral design does provide 1" more cabin space. The product uses the same attachment points (upper and lower) as standard partitions and hence allows a seamless installation into the cabin.

We offer a one-stop shop solution with high production flexibility and short lead times.

Do not hesitate to contact us for more information and discover the advantages of the iCAS partition.
