

"At Diehl, we combine tradition with innovation to provide **sustainable solutions** for our customers."

MAKE IT WORK SMARTER

Senior Backend Engineer (Java)

These are your tasks:

- Design, build, and maintain backend services and APIs with a strong focus on performance, security, and maintainability.
- Architect modular, scalable systems that align with product and business goals for long-term growth.
- Collaborate closely with frontend engineers, product managers, and other stakeholders to deliver reliable end-to-end solutions.
- Lead or contribute to the continuous improvement of backend architecture, development standards, and best practices.
- Write clean, well-documented code and automated tests to ensure maintainability and reliability over time.
- Review code and support continuous improvement by creating clear documentation and sharing knowledge.
- Proactively identify and resolve technical and architectural challenges in complex systems.

Who we are looking for:

- You have completed a university degree in an IT-related field such as computer science or have relevant experience that demonstrates comparable skills.
- You bring five or more years of professional experience in backend development.
- Experience building backend services in Java and/or other programming languages, including API design and working with modern frameworks.
- Solid understanding of software architecture principles, data modelling, and system performance optimization.
- Familiarity with microservices, containerization technologies, and CI/CD pipeline implementation.
- Experience working with relational and/or NoSQL databases and designing scalable, efficient data schemas.
- Excellent communication skills in English, with strong problem-solving and analytical abilities.
