

"I want to make a **difference in the world**.
Due to my engineering skills,
I can pursue this goal at Diehl."

MAKE IT WORK BETTER

Senior Quality Assurance Engineer

These are your tasks:

- Plan, design, write, and execute functional, regression, and exploratory tests for web and mobile applications to ensure high-quality releases.
- Collaborate closely with frontend and backend developers to report, track, and verify issues, driving rapid resolution and enhancing user experiences.
- Lead acceptance testing efforts by creating comprehensive test plans, maintaining detailed test documentation, and participating in test execution with stakeholders.
- Ensure alignment between business requirements and implemented features through thorough testing, validation, and quality assurance processes.
- Provide actionable feedback on UI/UX consistency, responsiveness, and usability, identifying issues related to frontend and overall user experience.
- Support the team by providing first-level assistance and guidance on questions related to application functionality and behaviour and contribute to knowledge sharing through clear documentation to foster continuous improvement.

Who we are looking for:

- You have completed a university degree in an IT-related field such as computer science or have relevant experience that demonstrates comparable skills.
- You bring five or more years of professional experience in software quality assurance.
- Proven experience writing detailed test cases, reporting bugs, validating fixes, and ensuring quality across diverse projects including desktop, mobile, and responsive environments.
- Solid understanding of web technologies and frontend development practices, with the ability to collaborate effectively with developers and designers.
- Experience with modern test management tools and methodologies.
- Excellent communication skills in English, with strong problem-solving and analytical abilities.
